EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Anderson (Reg. No. 33,826) on 9/8/05.

In the claims:

a. Replace Claim 1 as follows;

A host comprising:

a processor;

a memory coupled to the processor;

an operating system provided with an I/O bus abstraction to report multiple path via a cluster fabric to a target fabric-attached I/O controller that may be shared between the host and another host via the cluster fabric, the operating system to direct service requests between the host and the target fabric-attached I/O controller in response to the multiple paths; wherein the operating system further comprises:

a kernel;

a fabric bus driver to provide said I/O bus abstraction to the kernel for the cluster fabric to report the multiple paths to the target fabric-attached I/O controller;

and said fabric bus driver presents the cluster fabric to the kernel as a local I/O bus, and presents one or more target fabric-attached I/O controllers to the kernel as local I/O controller.

b. Cancel claims 2 and 3;

c. Rewrite claim 21 as follows:

A computer usable medium having computer readable program code embodied therein for use in a host system to report multiple paths via a cluster fabric to a target fabric-attached I/O controller, said computer program code when executed, cause a computer to:

create and report multiple paths from the host via the cluster fabric to the target fabric-attached I/O controller that may be shared between the host and another host via the cluster fabric;

enable reporting the multiple paths to the target fabric-attached I/O controller;

direct service requests between the host and the target fabric-attached I/O controller in response to the multiple paths;

present the cluster fabric to a kernel as local I/O bus; and

present one or more target fabric-attached I/O controllers to the kernel as local I/O controllers.

Art Unit: 2194

d. Rewrite claim 25 as follows:

A method of initializing a host to report multiple paths via a cluster fabric to a target fabric-attached I/O device comprising:

loading an operating system (OS) into a memory;

identifying all fabric-attached I/O devices assigned to the host, wherein the fabric-attached I/O devices may be shared between the host and another host via the cluster fabric;

reporting the identified fabric-attached I/O devices;

creating and reporting multiple paths via the cluster fabric to the target fabric-attached I/O device that may be shared between the host and another host via the cluster fabric;

directing service requests between the host and the target fabric-attached I/O device in response to the multiple paths; and

the identified fabric-attached I/O devices are reported, via a fabric bus driver included in the operating system (OS) to provide a local I/O bus abstraction for the cluster fabric into the memory, using a common set of procedures or commands.

e. Cancel claim 26.

f. Claim 27:

- line 1, replace "claim 26" with – claim 25 --;

g. Claim 28:

- line 1, replace "claim 26" with – claim 25 --;
